Skills transfer

Custom

Technology is part of the solutions. Users need real world skills transfers to be effective.

Companies are under pressure to keep up to date with product training for day-to-day use without the distraction of expensive certified training.

Our F5 skills transfer packages can ensure that your team are up and running quickly with the foundation training they need. Covering the most important aspects of the product, our experts work with your team to ensure their day-to-day operational effectiveness.

Skills transfer:

User training for staff

Technical and non-technical packages

Administration and troubleshooting tasks

Includes review process and procedures

Skills transfer topics

Overview of existing setup and configuration identifying which modules are used and what services they are used for.

Review Basic administration and helpdesk tasks – Enabling/Disabling virtual servers/nodes, adding new virtual servers, amending load balancing method

Troubleshooting techniques – reviewing logs, statistics

Keeping appliance software up to date and applying hotfixes

Updating SSL certificates

Adding licenses

Advise on configuration changes to create new virtual servers, iRules, visual policy editor for APM.

Advise on how to add additional authentication factors and amend sign in policies

Review health monitors and advise on creating custom monitors

Advise on port lockdown settings to ensure only required ports open.

Skills Transfer sessions are ideal for educating your team on the fundamentals and understanding of your environment, however, these are not a substitute for official training and course material or exam preparation isn't included. If Official Training is more suitable for your needs then please visit www.aditinet.uk/training
