Aditinet-skills transfer

Non-certificated real-world skills transfers for users

Installation	Health-check	Upgrade	Migration	Skills transfer	Custom

Technology is part of the solutions. Users need real world skills transfers to be effective.

Companies are under pressure to keep up to date with product training for day-to-day use without the distraction of expensive certified training.

Our Juniper skills transfer packages can ensure that your team are up and running quickly with the foundation training they need. Covering the most important aspects of the product, our experts work with your team to ensure their day-to-day operational effectiveness.

Skills transfer:

User training for staff

Technical and non-technical packages

Administration and troubleshooting tasks

Includes review process and procedures

Skills transfer topics
Overview of existing setup and configuration
Review Basic administration and helpdesk tasks – navigating the CLI, making configuration changes, committing changes, rollback changes
Troubleshooting techniques – reviewing logs, appliance status
Keeping appliance software up to date
Adding licenses
Advise on configuration changes to create new security policies or change interface / vlan settings
Creating backups of configuration

Skills Transfer sessions are ideal for educating your team on the fundamentals and understanding of your environment, however, these are not a substitute for official training and course material or exam preparation isn't included. If Official Training is more suitable for your needs then please visit www.aditinet.uk/training
