Skills transfer

Custom

Technology is part of the solutions. Users need real world skills transfers to be effective.

Companies are under pressure to keep up to date with product training for day-to-day use without the distraction of expensive certified training.

Our Palo Alto skills transfer packages can ensure that your team are up and running quickly with the foundation training they need. Covering the most important aspects of the product, our experts work with your team to ensure their day-to-day operational effectiveness.

Skills transfer:

User training for staff

Technical and non-technical packages

Administration and troubleshooting tasks

Includes review process and procedures

Skills transfer topics

Overview of existing setup and configuration as an overview of how the Palo Alto fits within the network

Review Basic administration and helpdesk tasks – Creating new security policies and NAT's

Troubleshooting techniques – reviewing logs and using the log filters

Keeping appliance software up to date along with dynamic updates for security profiles (AntiVirus, Threat Prevention etc)

Updating SSL certificates

Adding licenses

Advise on creating / troubleshooting site 2 site vpn's

Overview of current GlobalProtect configuration if used

Overview of current security profiles used

Overview of cluster settings / failover settings if applicable

Skills Transfer sessions are ideal for educating your team on the fundamentals and understanding of your environment, however, these are not a substitute for official training and course material or exam preparation isn't included. If Official Training is more suitable for your needs then please visit www.aditinet.uk/training
